

Sidewinder BP 30

Battery-Powered Sweeper

The Sidewinder BP 30 battery-powered sweeper is the perfect compact machine to clean both carpeted and hard floor areas, indoors and out. A 30-inch (75 cm) sweeping path makes it ideal for large areas, yet its compact design fits through doorways and into tight areas.

- The 12-volt, 145-AH battery provides 4.5 hours of continuous runtime. The on-board battery charger permits charging the batteries anywhere an outlet is available.
- The Sidewinder BP 30 is self-propelled with a traction drive system to reduce operator fatigue.
- The large 13.5-gal. (51-liter) hopper requires less frequent emptying.
- The Sidewinder BP 30 features a centrifugal fan with a 382.5 CFM (10.83 m³) air flow capacity to collect hard-to-sweep dust.
- The main filter with 32.3 square feet (3 square meters) of cellulose-area surface, combined with manual shakers, protects indoor air quality.
- The 15.4-inch (39 cm) side broom runs along walls and curbs to sweep debris into the pick-up path of the main brush.
- The ergonomically adjustable handle can be set at the operator's comfort level.

				Warranty	1 year limited

Productivity — The Sidewinder BP 30 will cover 31,900 sq. ft. per hour, for a total of 143,550 sq. ft. per charge.

The removable hopper makes emptying the Sidewinder BP 30 easy.

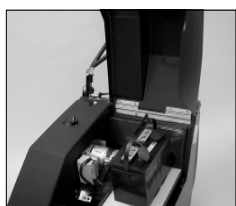

1 The deadman lever provides fingertip control of the traction drive.

8 This lever opens up the large-debris flap underneath the machine to pick up bigger items.

2 The on-board battery charger provides the convenience of recharging anywhere an outlet is available.

Two shaker knobs easily dislodge excessive dust from the filter.

The flip-top cover permits easy access to the battery, main brush adjustment knob, on-board battery charger, and other internal components.

3 Adjustable handle lets the operator set the handle height at the perfect comfort level.

4 The ABS plastic hood and body, which resist dents, cracks and corrosion, is mounted to a heavy-duty steel frame.

5 The main brush position can be monitored by checking the brush-height gauge.

7 A by-pass switch allows the operator to collect water-soaked debris without damaging the filter.

6 The adjustable side broom sweeps debris away from walls and curbs and into the pick-up path of the main brush.
